RETICLE GUIDE

APR-1C MOA SFP (2-16 HELIX HDLR)

Α	Center Dot (0.25 MOA)	G	Holdover Indication #
B+C	1/4 MOA Scale	Н	4 MOA Arrows
D	2 MOA Hash Lines	ı	1 MOA Hash Lines
E	4 MOA Hash Lines	J	Line Thickness = 0.1 MOA
F	Tapered Bars		Illuminated

DESIGN FEATURES

APR stands for "All-Purpose Reticle", and that's the concept behind the design of the APR C & D variants. The "C" is the "clean", or simpler of the two, with fewer markings than the "D" variant. The fine centre dot provides a precise aim point, and hash marks at 1, 2 and 4 MOA allow for elevation & wind holds.

CENTRE & HOLDOVER DOTS:

Free-floating dots allow for precise aim points without any peripheral lines distorting your view.

MOA-SCALE:

The MOA Scale on the horizontal & vertical crosshairs allow the shooter to measure objects downrange and quickly make adjustments. With one division equalling one click, the guesswork is gone. This helps with ranging targets, and obtaining a quick zero.

DE-CLUTTERED DESIGN:

With simple markings on the elevation & windage axis, and the absence of "christmas tree" dots, the shooter gets a clear view of his target with no distractions.

NUMBERED MARKINGS:

Numbers on the vertical axis allow shooters to quickly find holdover points in pressure situations like PRS/NRL matches, or that hunt of a lifetime.

ILLUMINATION:

The reticle is illuminated with 6 brightness settings for improved visibility in low light or high contrast environments.
